

# Adaptation of AgRobotics for Root and Bulb Vegetable Production in High Organic Matter Soils

Geoff Farintosh, Kevin Vander Kooi, Chuck Baresich, Kristen Obeid, Mary Ruth McDonald

# The Holland Marsh

- 50-80% organic matter
- Drainage began in the 1920s
- 7000 acres of muck soil

# Robot Trials - 2022

## Nexus Robotics – La Chèvre

- Mechanical weeder
- Scouting capabilities

## Naïo – Dino

- Autonomous tool-carrying robot
- Focused on weeding

# Robot Trials - 2023

## Naïo – Orio

- Autonomous tool-carrying robot
- On-board RTK GPS
- Fully electric, lithium batteries
- Four-wheel drive
- 5.5km/h top speed
- 1450kg weight
- Very adaptable

# Robot Trials - 2023

## FarmDroid – FD20

- Seeding and weeding robot
- Geotags each seed
- Inter- and intra-row weeding
- 0.95km/h top speed
- Solar-powered
- 1050kg weight

Live mode **Off**

Droid is **On**

sensor

# Seeding Methods

## Single Row FD20

- 3.4 cm between seeds

## Conventional

- 5 cm between seeds
- Double row

## Triple Cluster FD20

- 12 cm between clusters

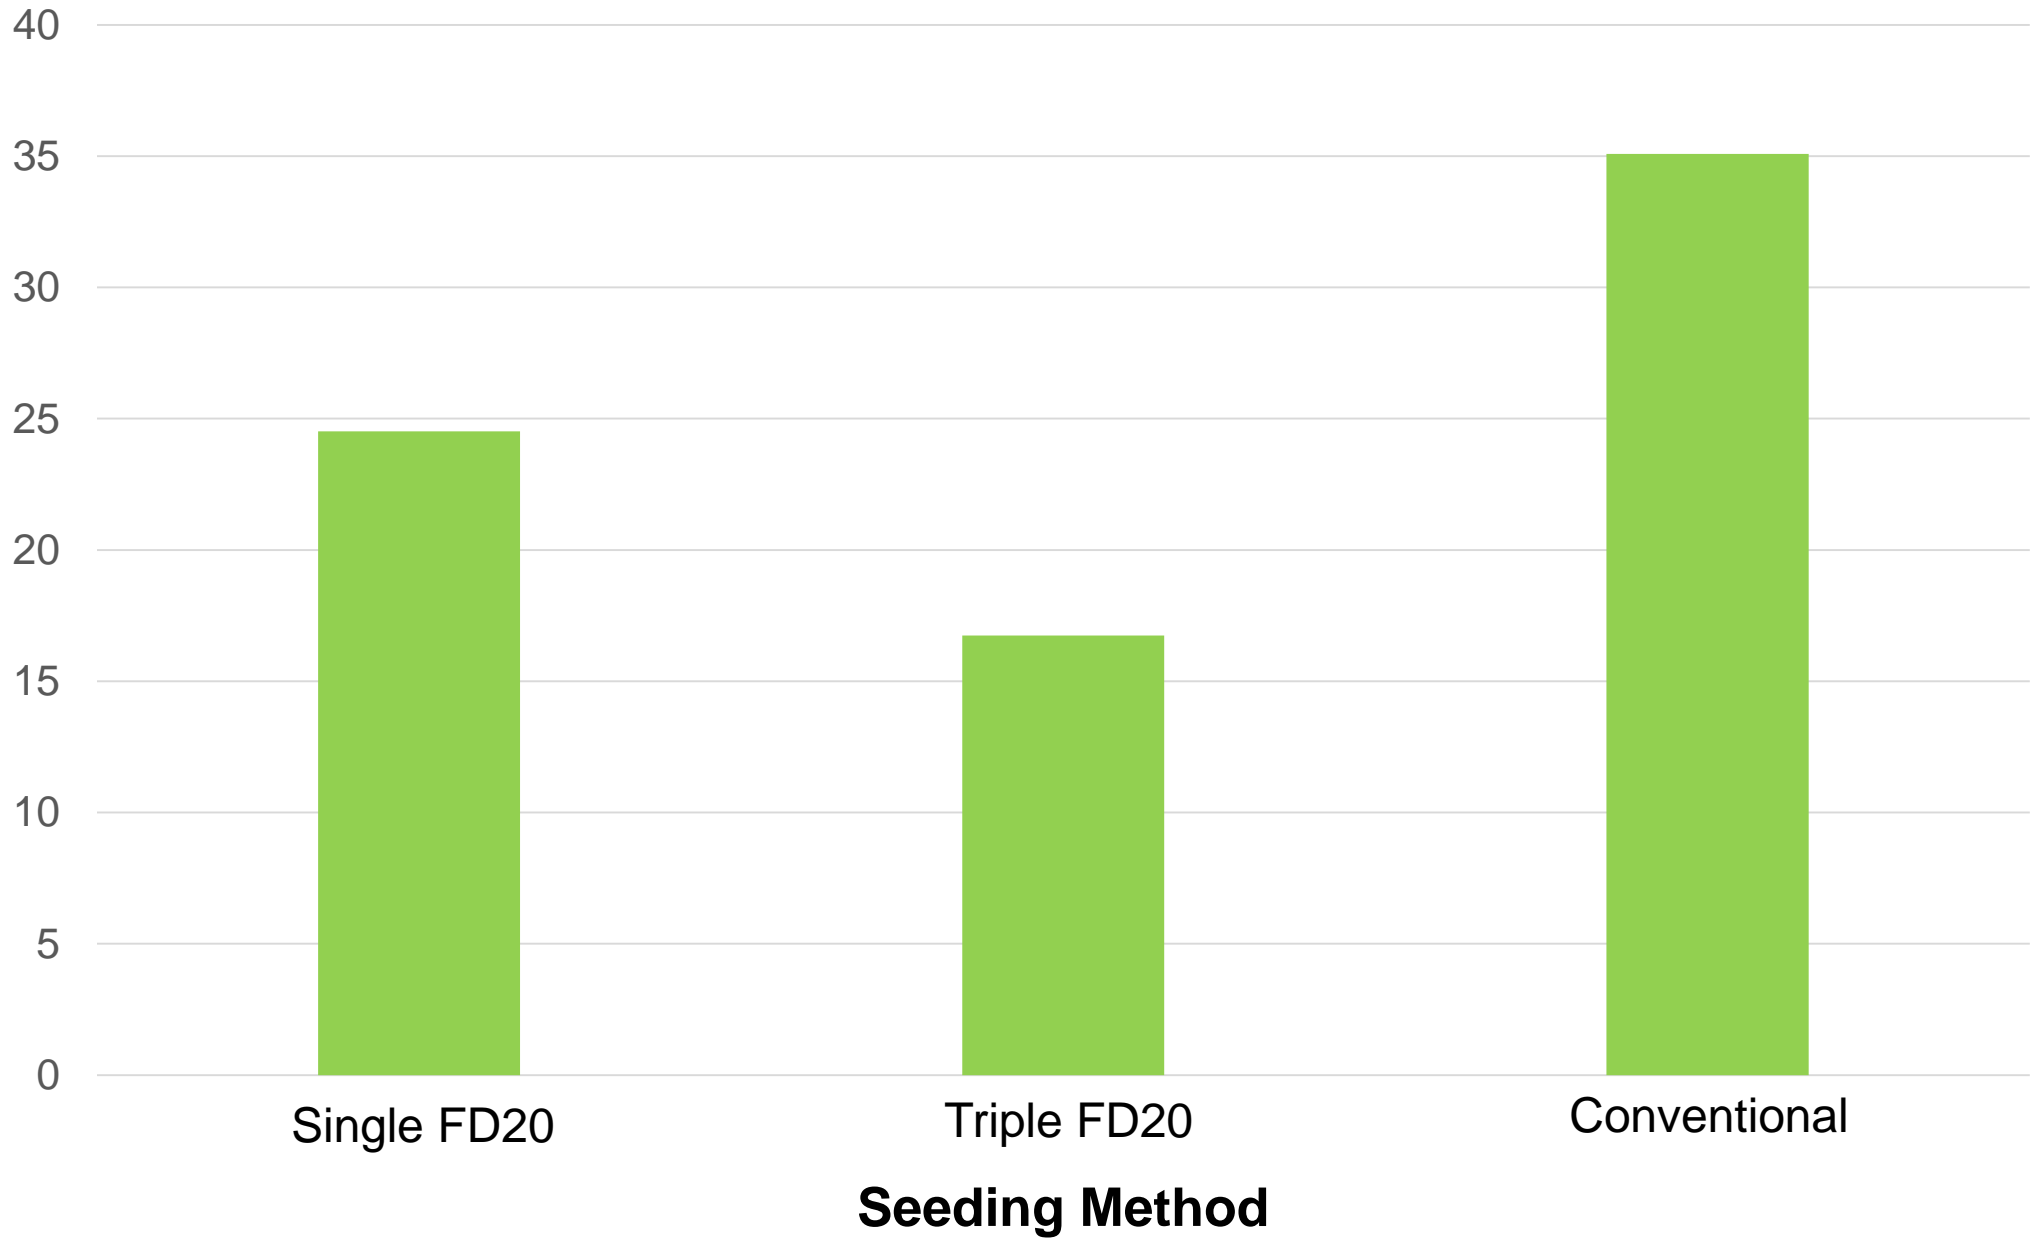

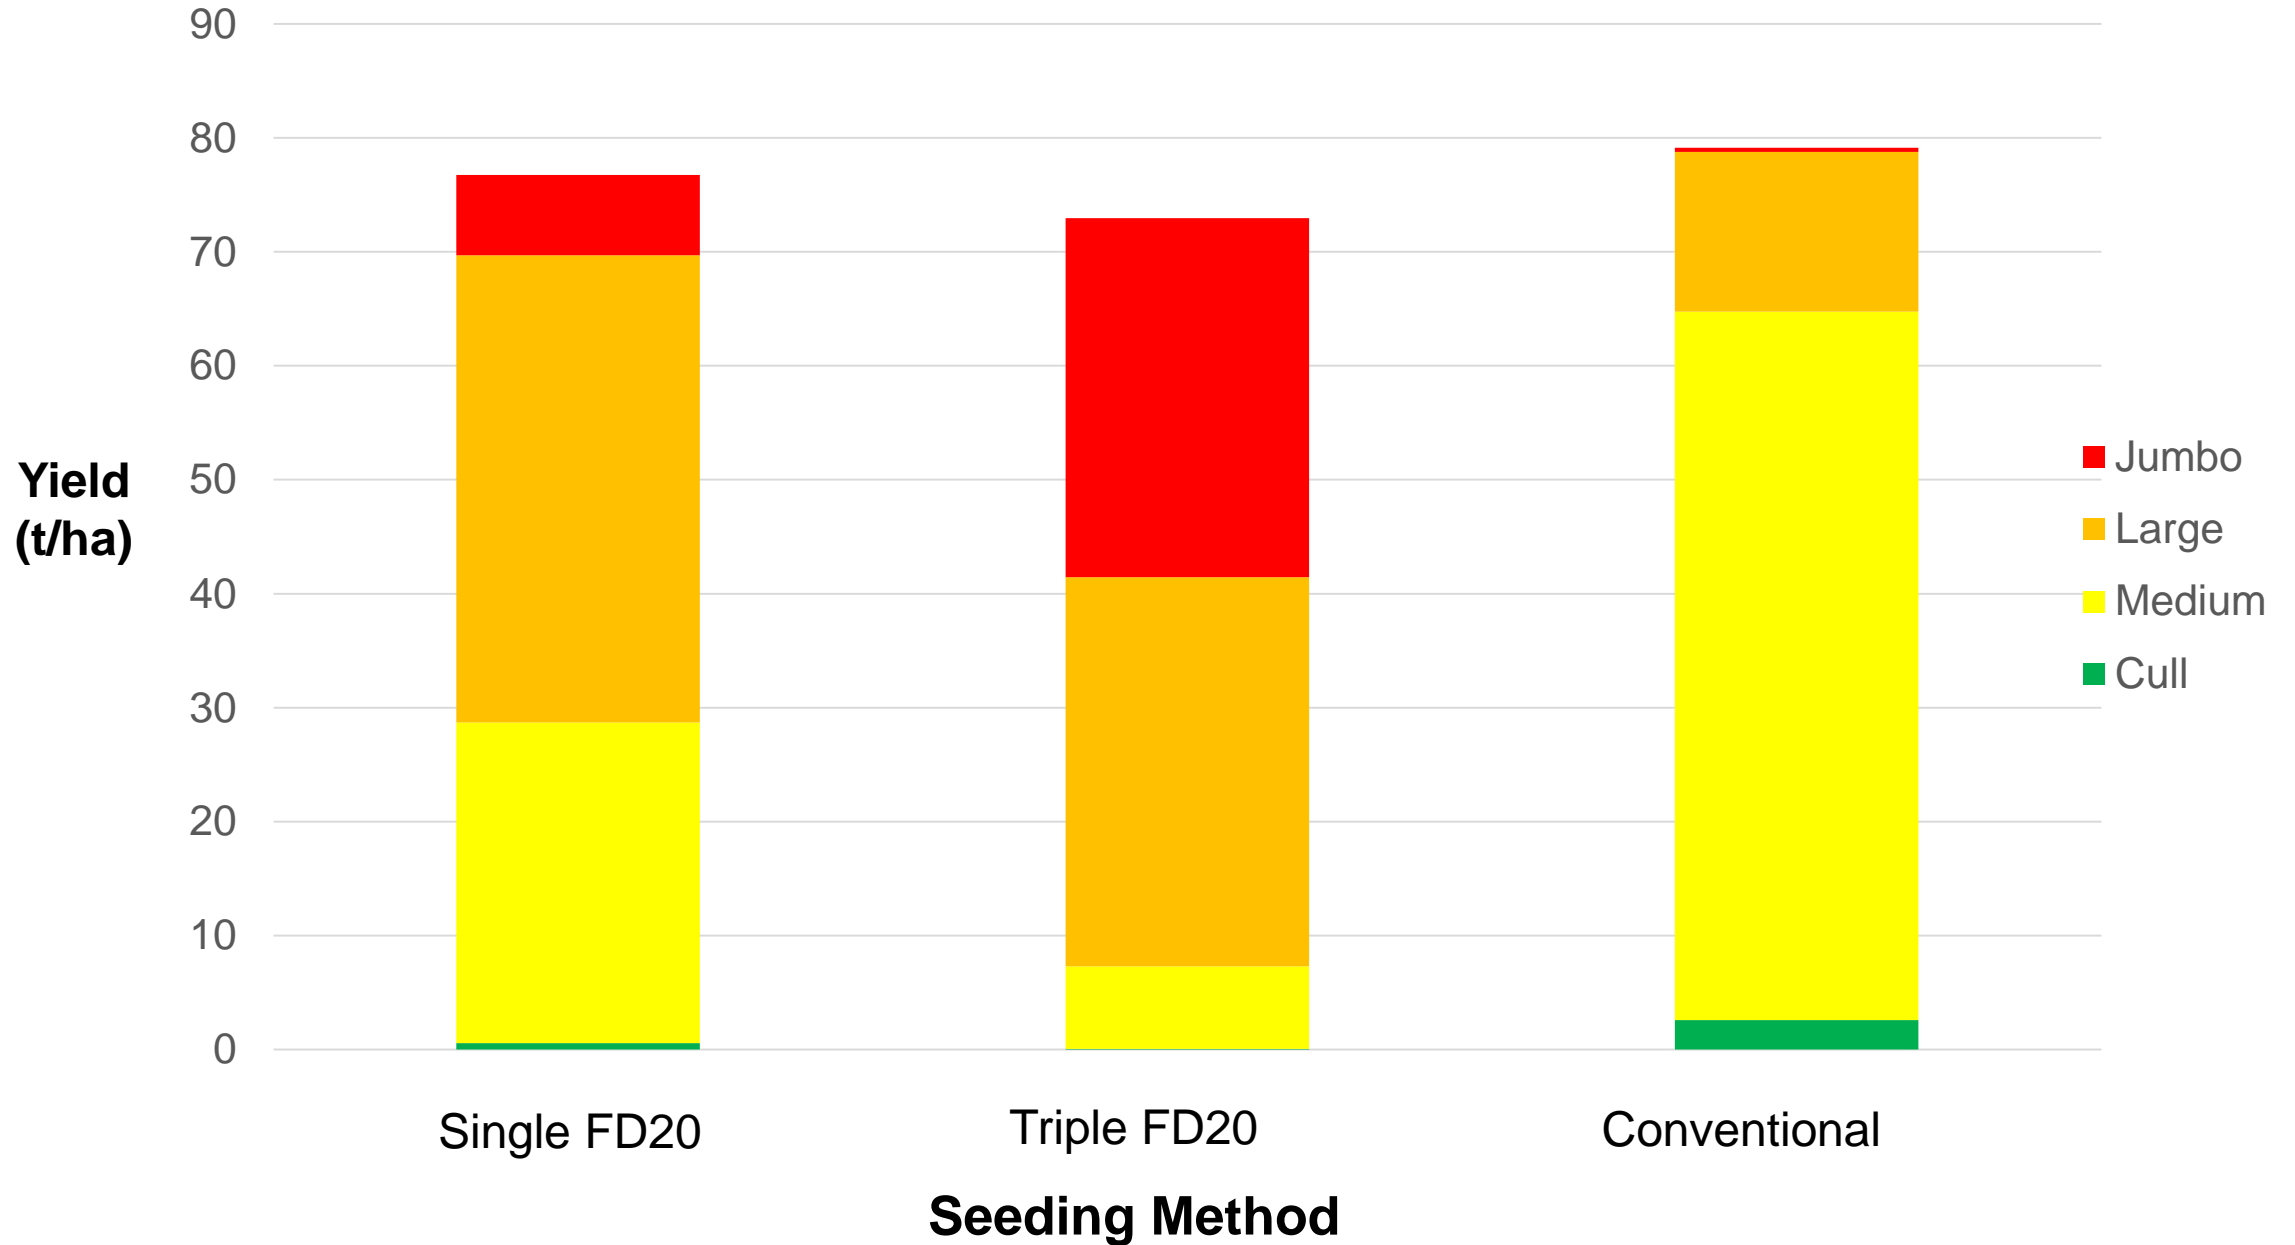

# Onions Per Meter

# Onion Yield and Size Distribution

# Onion Emergence

# Future Work

## FarmDroid – FD20

- 4 wheels instead of 3
- Improve tooling for weeding
- Optimize seeding methods

## Naïo – Orio

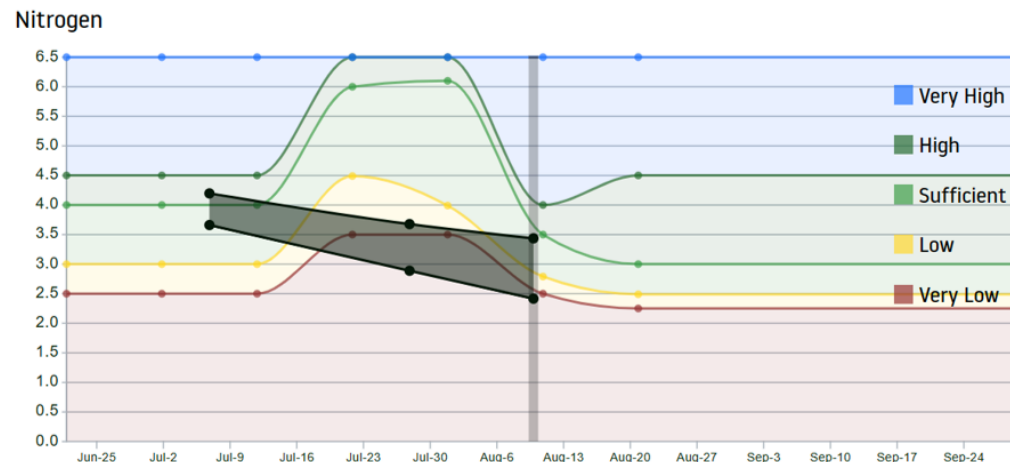

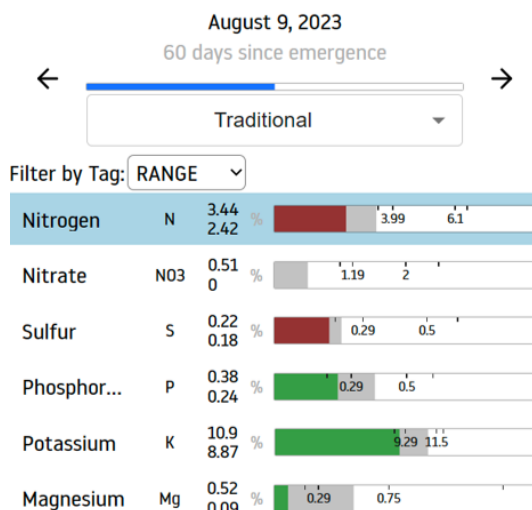

- Compare against tractor
- Figure out seeding implement
- Work in onions and other crops

# Picketa - LENS

- LENS – Leaf Evaluated Nutrient System
- Estimates nutrient content for 13 macro and micronutrients
- Model is currently being built for onions
- Could be mounted to a robot in the future

# Acknowledgements

- Thank you to Haggerty AgRobotics, OMAFRA, Picketa, the Ontario Agri-Food Innovation Alliance, the AgRobotics Working Group, and cooperating growers
